

*Monoflossenprogramm für den Tauchclub DiveStyle von Apnoe Professional für die Produktlinie Leaderfins:*

Freediving Sport Monofin.

99.00 €

Monofin is mostly used for freediving underwater orienteering, finswimming and long-distance swimming.

The blade from multilayer fiberglass is hand tapered. Our fibreglass consists of 18-21 layers and is proven in speed-swimming for a years.

Our standards imply 4 levels of stiffness but we can add hardness to your fins.

Monofin is with measures about 72 x 68 cm. (width x length), but can be produced by your individual measures.

Monofin have rubber ribs and rubber under the sole.

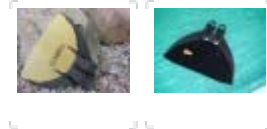

Original monofin blade color is YELLOW. Monofin with BLACK blade - price not change

Austria

Freediving Monofin Advanced

129.00 €

Wing constructed sport monofin for freedivers with open-heel footpockets. The wing construction reduces turbulence and stabilizes the fin. Makes the kick more powerful and concentrated. Small wings in the end of both sides add stability to your monofin. The blade from multilayer fiberglass is hand tapered. Our fibreglass consists of 18-21 layers and is proven in speed-swimming for a years. Our standards imply 4 levels of stiffness but we can add hardness to your fins. Monofin is with measures about 72 x 70 cm. (width x length), but can be produced by your individual measures. Monofin have rubber ribs and rubber under the sole.

Original monofin blade color is YELLOW. Monofin with BLACK blade - price not change.

## Freediving Monofin Flyer

259.00 €

Flyer - the newest type of freediving monofins.

This model has not floatation. It is perfect and ideal for Constant Weight and for Dynamic with Fins.

It gives advantage in 0,5-1 sec for 50 m comparing with usual mono.

The extra weight makes it feel very stable while diving.

Footpockets are draw beyond (moved farther) from the center of the blade, comparing with usual monofins.

The angle between the blade and footpockets makes thigh work less and you expend less strength.

Footpockets in this Flyer are made in press mold.

Blade is made from high quality multilayer fiberglass, which considered to be the best for speed swimming monofins.

Monofin is with measures about 72 x 70 cm.(width x length), but can be produced by your individual measures.

### Freediving Monofin Hyper

259.00 €

This hydrodynamically designed wing-typed monofin was constructed about 10 years ago.

The blade is made from high quality multilayer fiberglass, which is considered to be the best for speed swimming monofins. Footpockets are made like a natural extension of your legs.

The difference between Hyper and Flyer is in the higher angle between the foot and the blade. This gives the possibility to swim keeping small kick's amplitude without speed loss. In particular, it is very convenient for swimmers with not good shin bending.

The footpockets force the foot into exactly the correct position and the monofin stays firmly on the foot even by the strongest kick.

This monofin is very effective for dynamic apnea and constant weight in freediving. Our model is maximally lightened and doesn't have expressed buoyancy.

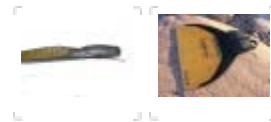

The monofin has measures of about 72 x 70 cm. (width x length), but can be produced by your individual measures.

Standard monofin blade color is yellow.  
Other color choice costs 30 euros.

Freediving Monofin Flyer Professional

379.00 €

Monofin is entirely custom made.

While monofin producing we taking into account all available information: weight, growth, distances, experience, trainings, age, aims.

Blade is made from high quality multilayer fiberglass, which considered to be the best for speed swimming monofins.

Footpockets are made form different kinds of rubber to do them like a natural extension of your legs.

The extra weight makes it feel very stable while diving.

This models is the best for dynamic fins. It gives advantage in 0,5-1 sec for 50 m comparing with usual mono.

Monofin is with measures about 72 x 70 cm.(width x length), but can be produced by your individual measures.

Discover your new level of potentiality!

Monofin producing time 6 weeks.

### Freediving Monofin Wings Carbon

299.00 €

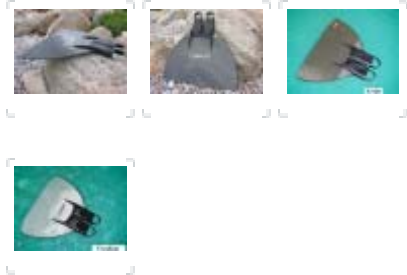

Carbon monofin with an angle in front of the blade,  
The blade of monofin is made from hand-laminated mixture of resins with carbon threads.  
For manufacturing is used the carbon based multy-layer raw material. Each layer in own turn contains big lot of one-directed carbon yarns.  
Carbon makes monofin more lightweight, resilience and very durable (covered with special protection layer).  
The blade is hand laminated and it is very good both for swimming with slow, relaxed strokes and faster swimming.  
We have 4 levels of stiffness, but we can add hardness to your monofins.  
Standard measures for the monofins are 70x72, but we can do the monofins according to your individual measures.  
Available with open-heel footpockets.  
All Freediving fins come with a one year warranty for materials and craftsmanship.

### Freediving Monofin Carbon Advanced

299.00 €

Resilience and quick, the blade of monofin is made from hand-laminated mixture of resins with carbon threads.  
Advanced monofin with lightweight blade and wings construction is easy to control in the water.  
The blade is available in 4 standard levels of stiffness, which allows the perfect fit to the different types of freediving and to the specific requirements of each freediver. We can add more stiffness upon request.  
The blades measurements are 70cm x 72cm, but we can customize the dimensions according to your special request.

All our freediving fins come with a one-year full warranty for materials and craftsmanship.

Austria

Freediving Monofin Free Flyer

349.00 €

Monofin was made after a lot of tests by leading freedivers.  
Special form and angle between the blade and footpockets make you more streamlined.  
Because of special designed construction, the blade becomes the extension of your body.  
The main differ between angle models is the angle not in the blade, but just between the blade and the footpockets.  
the blade is made from multilayer fiberglass. Hand tapered blade makes your kick more powerful.  
We have 4 levels of stiffness, but we can add hardness to your monofins.  
Standard measures are 70x72, but we can do the monofins according to your individual measures.  
All freediving fins come with a one year warranty for materials and craftsmanship.

Stereofins WAVES Carbon

130.00 €

Freediving Carbon stereo fins

High quality carbon fins, made from the hand-laminated mixture of resins with carbon, processed in moulds under vacuum.

The fins are available in 4 standard levels of stiffness, which allows the perfect fit to the different types of spearfishing and to the specific requirements of each diver.

The fins measurements with foot pockets size 42-44 are 20cm x 95 cm.

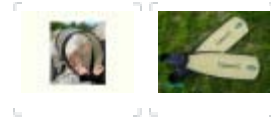

The fins also has full-length rubber rails for protection, hydrodynamic stability and for also a silent swimming.

All our freediving fins and blades come with a one-year full warranty for materials and craftsmanship.

Freediving Stereofins 2006.

149.00 €

Stereofins without angle.

High quality fiberglass blades, made with the same material tested for years in the highly resistant monofins with widely and well known results in international competences.

Fiberglass is a lightweight, very elastic and effective material. Which not only follows the path of the movement during the swimming, it also continues it. Eliminating the zones where the water flow loses its continuity. This way it makes the displacement through the water more continuous and smooth.

Really resistant to scratches and dings, with very good results in streaming waters, You will surprisingly notice that your legs will not be tired anymore, allowing you longer displacements and deeper dives improving your catches.

The blade construction consists of 18-21 layers of fiberglass, which provide extremely resilience and reactivity.

The blades are available in 4 standard levels of stiffness, which allows the perfect fit to the different types of spearfishing and to the specific requirements of each diver. We can add more stiffness upon request.

The blades measurements are 22cm x 70 cm, but we can customize the dimensions according to your special request.

The blade also has rubber rails for protection, hydrodynamic stability and for also a silent swimming.

All our freediving fins and blades come with a one-year full warranty for materials and craftsmanship.

Austria

Freediving monofin OMER

169.00 €

Wing constructed sport monofin for freedivers with closed heel footpockets. The wing construction reduces turbulence and stabilizes the fin. Makes the kick more powerful and concentrated. The blade from multilayer fibreglass is hand tapered. Our fibreglass consists of 18-21 layers. Our standards imply 4 levels of stiffness but we can add hardness to your fins. Monofin is with measures about 72 x 76 cm.(width x length), but can be produced by your individual measures.

Monofin have rubber ribs and rubber under the sole.

Original monofin blade color is YELLOW. BLACK monofin blade color for free.

Other color choice cost 30 euro.

## Stereoblades Carbon

209.00 €

Carbon stereoblades with the angle in front of the blade.

The blades are available in 4 standard levels of stiffness, however we can add more stiffness upon request

The blades measurements are 20cm x 75 cm, but we can customize the dimensions according to your special request.

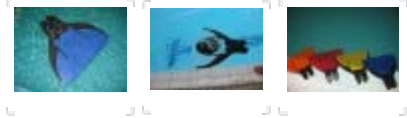

You can choose different kind of design for the end of the blade.

All our blades come with a one-year full warranty for materials and craftsmanship.

## Freediving Monofin Wings

259.00 €

### Freediving Monofin "Wings"

Monofin for freedivers with angle blade. This monofin was designed specially for freedivers.

The angle in front of the blades allows to keep the knees more straight and to increase the efficiency of your kicking technique.

We have 4 levels of stiffness, but we can add hardness to your monofins.

Standard measures for the monofins are 70x72, but we can do the monofins according to your individual measures.

Original monofin color is white.

Bag for monofins with pocket

25.00 €

Bag for monofins with pocket

Monobag is specially designed to accommodate freediving monofins. The bag holds 2-3 monofins. The pocket is ideally for with swimming accessories and sport tackle. Ideal for transport and storage. Designed with quality material, durable construction. Easy to remove.

## Freediving Monofin Freediver

219.00 €

### Freediving Monofin "Freediver"

Monofin for freedivers with angle blade. This monofin was designed specially for freedivers.

The angle in front of the blades allows to keep the knees more straight and to increase the efficiency of your kicking technique.

We have 4 levels of stiffness, but we can add hardness to your monofins.

Monofin is with measures about 72 x 74 cm.(width x length), but can be produced by your individual measures.

Original monofin color is white.

Other color choice cost 30 euro.

Freediving Stereofins with angle

189.00 €

Stereofins with the angle in front of the blade from handmade multilayer fiberglass. High quality fiberglass blades, made from the hand-laminated mixture of resins with fiberglass, processed in moulds under vacuum. The fins are sensitive and lightweight .

The angle in front of the blades allowing to keep the knees more straight saving your energy and making swimming more easy and convenience.

The blades are available in 4 standard levels of stiffness, which allows the perfect fit to the different types of spearfishing and to the specific requirements of each diver. We can add more stiffness upon request.

The blades measurements are 20cm x 85 cm, but we can customize the dimensions according to your special request.

The fins also has full-length rubber rails for protection, hydrodynamic stability and for also a silent swimming.

You can choose different kind of design for the end of the blade.

All our freediving fins and blades come with a one-year full warranty for materials and craftsmanship.

Freediving stereoblades with angle

139.00 €

Stereoblades with the angle in front of the blade from handmade multilayer fiberglass.

High quality fiberglass blades, made from the hand-laminated mixture of resins with fiberglass, processed in moulds under vacuum.

The angle in front of the the allowing to keep the knees more straight saving your energy and making swimming more easy and convenience.

The blades are available in 4 standard levels of stiffness, which allows the perfect fit to the different types of spearfishing and to the specific requirements of each diver. We can add more stiffness upon request.

The blades measurements are 20cm x 75 cm, but we can customize the dimensions according to your special request.

The blade also has full-length rubber rails for protection, hydrodynamic stability and for also a silent swimming.

Suitable for all kind of footpockets, our blades can be mounted in the most popular footpockets in the market.

All our spearfishing fins and blades come with a one-year full warranty for materials and craftsmanship.
